

## ACRYLICS

The unique Kirchhoff Schlagwerk specialty: our seamless acrylic shells are built in a complex and time-intensive process. The raw material is heated and **casted** perfectly in our own rotating moulds to create stainless shells without any seams for the best resonance.

Kirchhoff Schlagwerk acrylic drums are therefore hardly comparable to the industry **extruded** tubes or even glued panels from other manufacturers in terms of oscillation characteristics. Of course, the whole shell thickness after elaborate research is adapted to each drum size, to produce that homogenous sound you need.

## SOUND

A pronounced attack, a controlled bassy sustain through less mids with defined highs is what you get.

A very big dynamic range with a character of compressed basic sound is made for every kind of pop and rock 'n roll music. It already has the sound you're looking for without high-end studio equipment. Your engineer will love it!

## FEATURES

- + Seamless acrylic shells casted according to our own manufacturing process
- + 2.3 mm tripleflange powerhoops
- + Mini mass lugs with 60th toaster design
- + Custom sizes available (nearly every depth is realizable)
- + Handcraftes precision snarebeds and bearing edges
- + All sizes from 6" to 26" incl seamless BD hoops (despite 18" and 26" BD's)

## FINISHES

- + Transparent colors in more than **15 tones**
- + Solid Non-Transparent colors with **shine** or **matte** surface in more than **100 tones**. You name us a RAL tone and we try to match this color.
- + **10 pearl** colors and **11 sparkle** colors
- + Additional options to add you'll find in our custom shop
